

Project co-funded by the European Union  
under the Information and Communication  
Technologies (ICT) theme of the 7th Framework  
Programme for R&D contract n. 256980.

Network of Excellence on Engineering Secure Future Internet Software Services and Systems

## Creating a long standing research community

### project description

NESSoS aims at constituting and integrating a long lasting research community on engineering secure services and systems. The project addresses security concerns during the early phases of the development lifecycle of software services and systems, thus contributing to reduce the amount of vulnerabilities and enabling the systematic treatment of security needs through the engineering process. Results are achieved by an integrated and harmonized research programme, by improving the necessary assurance level and by addressing risk and cost during development phase, in order to prioritize and manage investments. NESSoS also impacts training and education activities in Europe, and collaborate with industrial stakeholders to improve the industry best practices and support a rapid growth of software-based service systems for the Future Internet.

start date  
01 October 2010

end date  
31 March 2014

project funding  
3.800.000 Euro

website  
[www.nessos-project.eu](http://www.nessos-project.eu)

### spreading of excellence

NESSoS partners are committed to spread their knowledge and research results to the multitude of interested stakeholders, in both academia and industry. Communication about the foreseen impact and progress for Europe also targets a wider audience. The main activities for spreading excellence are dissemination & communication, education & training, and exploitation & standardization.

#### consortium

### integration

**Joint Virtual Research Lab**  
Integration of existing  
partners infrastructures

**Tools & Methodologies**  
Partners will work towards connecting their methodologies and tools

**Mobility Program**  
Integration of the partners will leverage on a wide mobility program

**Road-mapping and Community Building Efforts**  
Integration of scientific communities:  
security, software & services engineering

**Knowledge Portal**  
Composed of research findings  
and industrial best practices

### research

Requirements modeling  
support for Future Internet applications

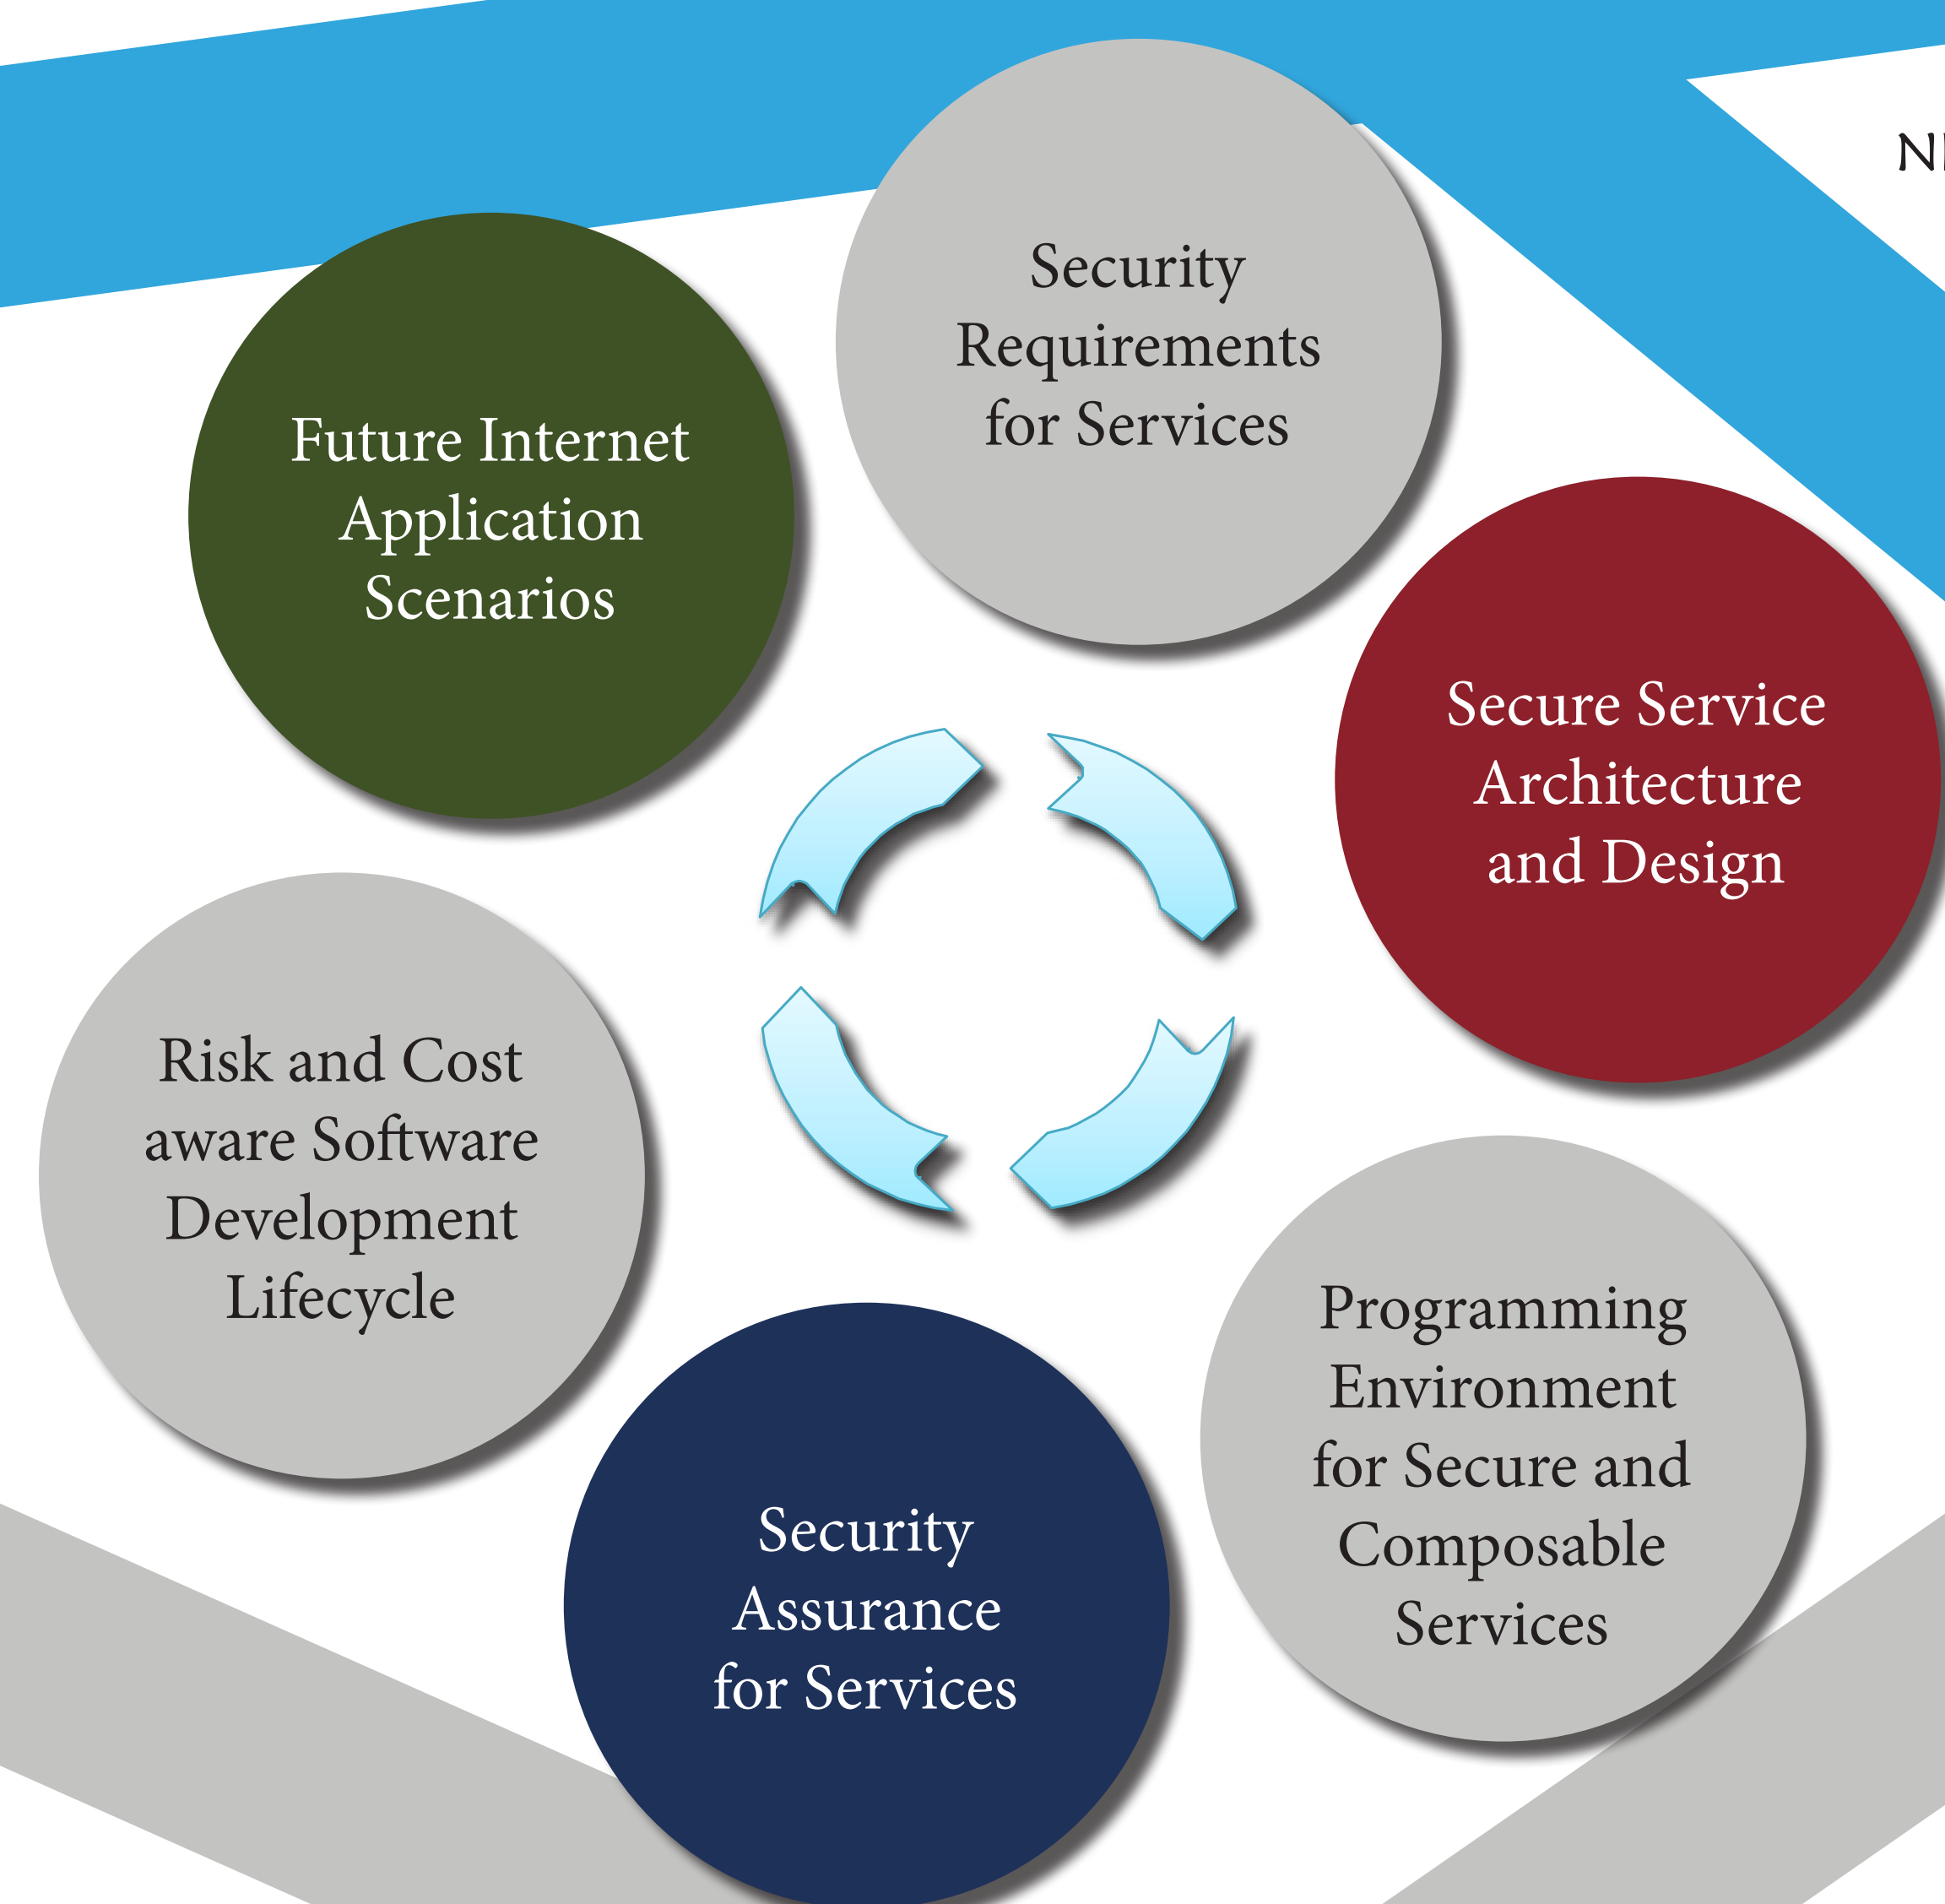

Develop design methods to enable the creation  
of a secure architecture

Support to enforce complex security policies on Future Internet applications

Enable assurance in the development of software based services to ensure confidence  
about the security level

Identify engineering processes that optimize value-for-money in terms of minimizing risk,  
while keeping cost low and justified

The NESSoS research is driven and validated by using  
Future Internet Application Scenarios
