

NESSoS activities on privacy enhancing technologies are going to be presented at the SMART workshop ( [www.ittig.cnr.it/smart2012](http://www.ittig.cnr.it/smart2012) ).

The aims of the Workshop are to

-

announce intermediary results achieved under the project on smart surveillance systems from a multidisciplinary approach, crossing law, sociology, technology and economics;

-

discuss the intermediary results with stakeholders and experts involved in the study/application of such systems in order to receive an informed feedback

-

bring together experts from different perspectives (policy makers, research and academia, intelligence, police and security forces and citizen groups) and contexts (International, European and national) in order to share experience and knowledge as well as to discuss risks and opportunities inherent to the use of smart surveillance.
